Crème de la Mer, renowned for its transformative skincare properties, is rooted in science and innovation. The key to its effectiveness lies in the brand's proprietary Miracle Broth™, a bio-fermented blend of sea kelp, vitamins, and minerals. Developed by aerospace physicist Dr. Max Huber, the cream was born from his quest to heal burns sustained during an experiment. Over 12 years and 6,000 experiments, Huber perfected the fermentation process, which enhances the bioavailability of the ingredients, allowing them to deeply nourish and rejuvenate the skin.

This potent formula works to soothe irritation, boost skin's natural renewal process, and improve hydration, making it particularly effective for reducing fine lines and improving overall skin texture. Crème de la Mer's success in the beauty world is a testament to the power of science-driven skincare. It offers luxury skincare that blends nature with cutting-edge research to deliver visible results for a radiant complexion.
